

****Data Engineer****

****Job Overview:****

Join our forward-thinking team as a Data Engineer, where you will play a pivotal role in architecting, building, and maintaining advanced data pipelines and infrastructures. This position is ideal for someone passionate about leveraging modern data processing technologies to drive significant insights and improvements across our organization. You will work closely with diverse teams to enhance data system availability, reliability, and performance, ensuring our initiatives are both innovative and impactful.

****Key Responsibilities:****

****Data Pipeline Development:****

- Design, build, and refine sophisticated data pipelines to manage large-scale data, incorporating both structured and unstructured data types.
- Develop and enhance ETL processes using cutting-edge tools like Apache Airflow, DBT, or similar technologies to seamlessly integrate data from various sources into our ecosystem.
- Implement advanced data validation and quality assurance practices to maintain high data integrity and reliability.

****Data Modeling and Architecture:****

- Construct and upkeep logical data models, schemas, and database architectures, utilizing modern design patterns to support complex data analysis and decision-making processes.

****Education & Qualifications:****

- Bachelors degree in Computer Science, Data Science, Information Technology, or a related field.

A Masters degree is preferred.

- Proven experience with SQL and NoSQL databases, data pipeline tools, and cloud services (AWS, Google Cloud Platform, Azure).
- Strong proficiency in programming languages such as Python, Scala, or Java.

****We Offer:****

- A collaborative and inclusive work environment where creativity and innovation are encouraged.
- Opportunities to work with state-of-the-art data technologies.
- A commitment to professional development and continuous learning.

****Join Us:****
